

OSSB's Site Logistics Plan/Notes/Instructions

Attached is a sheet outlining the OSSB Site Logistics Plan with notes for the forthcoming construction of the new academic and residential buildings. Please study this sheet.

The sheet depicts the campus map with construction area; construction fence posted around the construction area; construction gates with trailers and parking for the workers; emergency vehicle access; new school bus drop-off and pick-up area; new event parking and additional parking areas. There is a legend on the sheet illustrating what is what – e.g., orange line meaning a 6' chain link construction fence around the construction area will be put up.

- Any and all entry to OSSB (except construction) will be from Foster Avenue. Construction workers will access the new academic and residential buildings from the High Street entrance.
- School busses, vans, and cars will enter from the Foster Avenue entrance, follow the drive to the left, continue behind the pool and the cottage, to a drop off point at the back of the building. You should access Foster Avenue from Lincoln Avenue (goes east or west) and in our back gate. (See attached street map.)
- Busses will have to wait in line until they can pull up to the drop off point, unload, and then proceed around the drive to exit.
- Exiting will also be from the same - Foster Avenue to Lincoln Ave.
- Any wheelchair lift busses will drop off at the nurse's station just before the swimming pool building. (see campus site map)
- There will be speed limit posts along the route and the speed limit is strictly 10 mph.
- Staff, when entering or exiting OSSB, must observe the school busses/vans/cars' right of way when dropping-off and/or picking-up students.
- Parts of the new roadways and parking spaces will be compacted limestone.
- A new temporary compacted limestone parking area alongside the track will be built for first shift staff use.
- Second and third shift staff only will be parking behind C-1. (see campus site map)
